THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

### HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

**IMPORTANT REMINDER:** Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

**DETAILED ACTION**

***Introduction***

1. This communication is in response to the Applicants' communication dated July 30, 2009. Claims 1-7 and 9 were amended. Claim 8 was canceled. Claims 1-7 and 9 of the application are pending.

***Reasons for Allowance***

2. Claims 1-7 and 9 of the application are allowed over prior art of record.
3. The following is an Examiner's statement of reasons for the indication of allowable subject matter:

The closest prior art of record shows:

(1) a method for determining the applied torque in a screw joint, being tightened by a series of torque impulses; the rotational movement of the screw joint is detected during each impulse and the point at which the screw joint ceases to rotate is detected; the applied torque is indicated at the very moment the screw joint ceases to rotate; the per impulse increasing value of the applied torque is compared to a predetermined target value and the tightening process is interrupted when the target value is reached; for quality checking, the angular displacements achieved at repeated impulses are added and compared with the high and low limits of the total

angle of rotation; the high and low limits of the final torque are also compared to the actual torque achieved; a torque impulse delivering power tool used in this method includes an impulse generator, a torque transducer and a rotation detection device and a process control device and a device to provide a torque target value; a comparing unit compares the actual values of the torque with the target value and shuts off power supply to the power tool when the target value is reached (**Schoeps**, U.S. Patent 6,341,533);

(2) a method for determining the optimum control parameter values for a screw joint tightening process carried out by a power wrench; the power wrench is controlled by a programmable control system utilizing the determined parameter values; the control system is provided with a screw joint tightening characteristic parameter values and operation parameter values characteristic of the actual power wrench used in the tightening process; the tightening process is mathematically simulated using the screw joint and power wrench characteristic parameter values and pre-chosen operation control parameter values; the results of simulated tightening process are evaluated using the predetermined criteria; thereby determining suitable operation control parameter values to be used during production tightening of the actual type of screw joint (**Hansson**, U.S. Patent 6,785,591); and

(3) an instrument connected to a driving tool for driving elements in the form of an implant for dentine; the tool includes an electric motor, whose torque can be sensed and controlled by a control unit; a display unit is used to partly or fully display a curve representing the driving function performed; a tightening function is determined based on the slope of the curve; a flatter slope represents a lower quality function and a steeper slope represents a higher quality function; a frictional resistance that exists for an element during the driving of the

element is determined to allow secure locking of the element by tension in the material of the element (**Dawood et al.**, U.S. Patent 6,547,565).

Additional state of the art reviewed and considered by the Examiner is found in European Patent EP 1015187 B1.

None of these references taken either alone or in combination with the prior art of record discloses a method for quality assurance of screw joint tightening of a screw joint to a needed pretension condition (FN) by a torque delivering power tool, specifically including:

(Claim 1) “performing at least one simulation procedure of a screw joint tightening process via a specific algorithm aiming at said needed pretension condition (FN) by using programmed data concerning screw joint geometry, expected frictional conditions, operational characteristics of the power tool, a chosen tightening strategy, and adaptable values of at least one tightening parameter, thereby arriving at a simulated pretension condition (Fs) acceptably close to said needed pretension condition (FN),

performing in practice a practical screw joint tightening process by controlling the power tool in accordance with said chosen tightening strategy and aiming at said needed pretension condition (FN) by using said specific algorithm as well as programmed data concerning said screw joint geometry, said operational characteristics of the power tool, and tightening parameter values as derived from said simulation procedure, thereby arriving at a practically processed pretension condition (Fp),

comparing said practically processed pretension condition (Fp) with said simulated pretension condition (Fs), and

evaluating the outcome of said comparison for quality acceptance or refusal" in combination with the remaining elements and features of the claimed invention.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
